I'm a software engineer with **8+ years of experience** building complex web and mobile applications. I'm passionate about delivering high-quality, customer-focused solutions and thrive in collaborative team environments.

## Timeline

### Education

#### The New College

2013 - 2016

Bachelor of Computer Applications

#### Aalim Muhammed Salegh College of Engg.

2016 - 2018

Master of Computer Applications

### Work

#### Nexusinfo - Bengaluru

Nov 2017 - Feb 2018

Android Developer - Intern

#### Calibraint - Chennai

Mar 2018 - Sep 2020

Mobile Application Developer

Sep 2020 - Mar 2022

Senior Software Engineer

Mar 2022 - Nov 2022

Associate Technical Lead

#### Crayon Data - Chennai

Dec 2022 - Apr 2024

Software Engineer - Flutter

#### Liven - Abacus - Chennai

Apr 2024 - Present

Software Engineer - Flutter

## Skills

Flutter - Dart

Android - Kotlin, Java

Angular - TypeScript, JavaScript

Figma - UI/UX

Firebase - FCM, Firestore, Auth, ...

## Experience

(chronological)

### Project #01 - Inksoft

**Role:** Front-end Developer

**Technologies Used:** Angular, Typescript

**Description:** Customers get utmost satisfaction when the product they need can be customized as per their requirements. Inksoft is a Web Application developed for selling customizable printed t-shirts.

### Project #02 - Collin College

**Role:** Front-end Developer

**Technologies Used:** Android, Java

**Description:** An Android app designed for Collin College students in Texas, USA, to manage classes and campus information. Features include daily class schedules, weather, travel and parking times, Canvas links, professor contacts, and textbook links.

[App showcase](#)

### Project #03 - ChoreRelief (allbetter)

**Role:** Front-end Developer

**Technologies Used:** Android, Java

**Description:** ChoreRelief, now rebranded as allbetter, is a mobile app for outsourcing chores and household projects in a local, on-demand marketplace. It empowers users by sourcing all work locally in the Chicago-land area, reinvesting money back into the community.

[Play Store](#)

### Project #04 - TilloApp

**Role:** Full-stack Developer

**Technologies Used:** Ionic 4, Firebase, NodeJS

**Description:** TilloApp is an Android & iOS application developed for Farmers in SA to manage everything in and around their farms. It is a simple tool, which streamlines everything that farmers need to manage their farm in one place, which is on their phones. It helps them to easily communicate with their workers, keep and retrieve historical records and manage daily tasks, with no use of paper. It gives them real-time convenient control of all their activities and resources.

### Project #05 - Wall Street English

**Role:** Front-end Developer

**Technologies Used:** Android, Kotlin

**Description:** Mobile Application for learning English from the most renowned institute Wall Street English. Provides students with many interactions to learn the language.

[Play Store](#)

### Project #06 - TengolInternet

**Role:** Front-end Developer

**Technologies Used:** Flutter

**Description:** Developed a Flutter app that allows users to view the status and usage of their WiFi network, as well as contact support directly from the app.

[Play Store](#)

### Project #07 - Alcon Vision Educator

**Role:** Front-end Developer

**Technologies Used:** Flutter

**Description:** Developed a Flutter app for web, tablets, and iPads that helps patients considering cataract surgery to understand their Intraocular Lens (IOL) options through a pre-operative image simulation.

[Web app](#)

### Project #08 - OmniCounts

**Role:** Front-end Developer

**Technologies Used:** Android, Kotlin

**Description:** Mobile Application that provides uncomplicated app-based counting solutions that enable modern retailers to count when and how they want.

[Play Store](#)

### Project #09 - Maxis Assets

**Role:** UI/UX, Full-stack Developer

**Technologies Used:** Figma, Flutter, Firebase

**Description:** Developed a Flutter app that allows employees to manage physical assets, such as books and devices, using a QR code scanning system.

[Play Store](#)

### Project #10 - iQi Quick Start

**Role:** Full-stack Developer

**Technologies Used:** Flutter, Firebase

**Description:** Developed a Flutter app that allows users to post and view guides for various peripherals from iQi, with the ability to add images and videos as slides in an Instagram-like UI.

### Project #11 - Y9 - Microfinance

**Role:** Front-end Developer

**Technologies Used:** Flutter

**Description:** Created a mobile app for a Tanzanian bank enabling customers to buy smartphones on loan and make daily repayments. Features include NIDA and KYC verification, short-term loans, credit score checks, and a separate agent app for customer onboarding.

[App showcase](#)

### Project #12 - Abacus KDS

**Role:** Front-end Developer

**Technologies Used:** Flutter, MQTT

**Description:** Worked on a Tablet/iPad/Windows app that displays orders sent from the POS. Chefs in the kitchen can view these orders with item details and update their status. The app stays connected with multiple instances of other KDS units, functioning as either a master or a slave through the use of an MQTT server. It uses the Hive database to locally store orders received from the POS or the master KDS in the form of MQTT messages.

### Project #13 - Abacus Online Ordering

**Role:** Front-end Developer

**Technologies Used:** Flutter

**Description:** Led the design and development of Abacus Online Ordering, a multi-tenant Flutter platform that enables restaurants to offer branded mobile ordering, payments, and loyalty experiences. Architected a script-driven configuration injection system (SKIN) to support rapid tenant onboarding without flavors, and built internal tooling including a web-based Online Ordering Studio for managing branding, assets, and feature configuration with real-time preview. Refactored a large, unstructured legacy codebase into a clean, modular architecture, significantly improving maintainability, build reliability, and developer productivity.
